---

## MANAGEMENT SKILLS

SDLC, Database management Systems, Data structure and UNIX, management Information Systems, Business, Application, Software project management and EDP management, Elements of technology

---

## PROJECTS

**Project Name :** [SoundWave](#) | [Link to Github](#) | [Link to deployed site](#)

**Role in project:** Front End Development

- A Web application that you can use to stream Music from the Internet into your device. The core feature of our app is that, the user can do a lyric search and get the lyrics of his favorite song from our app through Musixmatch. Can also search playlist for a particular artist from last.fm. Music streaming is another core function of our application. Naturally, it should support uninterrupted streams of music files from last.fm, so that our users can enjoy high-quality playback.
- App is also Mobile Responsive; hence user can use it from his mobile, tab or desktop. I worked in a team, and I was responsible for the website GUI. Used the below technologies
- Tools/languages used
  - HTML, CSS, Bootstrap, Media Queries, Fonts.
  - JavaScript (JQUERY & AJAX). Firebase
